

BRAND-NEW AT THE FGL WORKSHOP!

These days, we have a fine fleet of equipment that we are proud of and want to preserve.

To do this, we want to refine our maintenance follow-up procedures by being proactive and controlling the operations efficiently. **Hewitt Equipment** provided some tools to help out. Their **Product Link™ system** is now part of our equipment. This system allows follow-up on key elements such as hours of operation, fuel consumption, etc. and will transmit reports showing data of time and location. All this information will automatically be configured and displayed in color-coded graphics to indicate the situation at first glance. An alarm will be sent to the mechanical supervisor in case the equipment becomes seriously damaged, so they can respond to this situation quickly.

This tool will ensure better monitoring of our equipment and provide better management of our fleet.
